

**Operator Sudoku:**

An Operator Sudoku is a Sudoku in which a number of positions are clustered, for that positions the multiplication, the sum or the difference is known.

**Explanation:**

The **sum (+)** of the three positions marked with the blue line, is: 19.

--	--	--

Solution:

8	5	6
---	---	---

 $8 + 5 + 6 = 19$ 

The **difference (-)** of the two positions marked with the blue line, is: 3.

Solution:

4
1

The difference is always positive, so  $1 - 4$  as well as  $4 - 1$  gives: 3.

The **multiplication (\*)** of the three positions marked with the blue line, is: 54.

	7

Solution:

3	9
2	7

 $3 * 9 * 2 = 54$
